**Neuralog and Volant Solutions announce
integration of NeuraDB and EnerConnect™ for data management and transfer**

*Enable NeuraDB users to efficiently move data from NeuraDB to their geoscience applications
such as PETRA, Geographix and OpenWorks.*

(USA, Houston, TX: October 24, 2011) Volant Solutions (www.volantsolutions.com) and Neuralog (www.neuralog.com) announce their strategic partnership to deliver a commercial integrated data management solution for the Upstream Energy industry. This partnership has immediately resulted in the delivery of Neuralog's industry-leading NeuraDB™ E&P Data Management system integrated with Volant's next-generation EnerConnect™ integration solution to support the ability for users to efficiently transfer geoscience data from NeuraDB's PPDM database to IHS's PETRA interpretation application. The announcement was made at the [PPDM Annual Group Meeting](#) in Calgary, Alberta.

"This agreement with Neuralog will enable Volant to provide their customers with the additional capability of moving data to and from NeuraDB's data management system via Volant's next-generation EnerConnect integration framework", said Scott Schneider, President and CEO of Volant. "The ability to tightly integrate our EnerConnect framework into the NeuraDB application will provide users with a seamless ability to transfer data between NeuraDB and PETRA. With future plans to integrate additional geoscience applications into the NeuraDB platform, Neuralog and Volant can provide an even richer set of integration workflows to meet our client's E&P data management requirements."

This collaboration between Volant and Neuralog is expected to result in the integration of a number of geoscience applications that are currently supported by the EnerConnect platform. The applications currently on the plan for integration into NeuraDB are Petrel, OpenWorks, Paradigm and Geographix.

"This agreement with Volant Solutions provides our NeuraDB users with the ability to automate delivery of data to IHS Petra from within NeuraDB. The open standards of NeuraDB's PPDM data model provide an easy framework for data interoperability. Our goal is to develop a sophisticated, yet easy to use data management system that provides access to the best available data, directly within their interpretation systems." said TarunChandrasekhar, Head of Development, Data Management. "The integration between Neuralog's data management and Volant Solutions' connectivity further demonstrates Neuralog's commitment to this endeavor."

About Volant Solutions

Volant Solutions (www.volantsolutions.com) offers an innovative approach to address the challenges of managing and accessing ever-increasing quantities of scattered geotechnical data. Focused on the Upstream Energy marketplace, Volant is an independent software vendor with significant experience developing and delivering software solutions that automate and integrate

technical data, applications and work flow processes. Volant's EnerConnect product is the solution of choice of numerous industry leading Upstream Oil & Gas companies to integrate their key geoscience databases and applications.

About Neuralog[™]

Neuralog (www.neuralog.com) is a software/hardware provider for the oil & gas industry, leading in data preparation for logs, maps and other E&P data, and providing scalable E&P data management solutions based on PPDM and ESRI to find, index, organize, qc and deliver your data when you need it. There are thousands of Neuralog users in over 70 countries.
